July 2011

## HAPPY FOURTH OF JULY

SUMMER HAS ARRIVED

## WE WILL BE APPLYING FUNGICIDE THIS MONTH

### HELP US HELP YOU

As you see your Property daily, we rely on you to alert us of any problems. Problems can include; Brown or White Spots in the Lawn, Discolored Leaves on trees and shrubs, and Sprinklers not coming on, or coming on at the wrong times or days.

### WATERING YOUR LAWN

Homeowners often ask, "how much water does our lawn require?"

**SUNNY LAWN AREAS** NEED 60 - 75 MINUTES PER ZONE EVERY OTHER DAY AND **SHADY LAWN AREAS** NEED 30 MINUTES PER ZONE EVERY OTHER DAY.

Please remember, although it may rain from time to time, often this is not sufficient to maintain a Healthy Lawn.

If you have a Irrigation System, there is most likely a Rain-Sensor attached, and there is no need to turn the system off. If you are unsure, or your rain sensor is not working, Please call to make an appointment with Sid, our Irrigation Specialist.

If you still have not had your sprinklers turned on, it's not too late. Please call our office to make an appointment with our Irrigation Specialist.

### WHAT IS THAT?

**NUT-SEDGE**, as seen below, closely resembles grass. It is however, a perennial weed that grows faster than grass. Although it will not kill the grass, it will spread very quickly. It is easily identified as it is thicker than the surrounding grass and paler in appearance. If you notice the appearance of **NUT-SEDGE** in your lawns please let the office know, so we can treat it before it spreads.
